

EDUGENIE

Project Development Phase

1. Development Overview: The development phase converts the approved EduGenie design into a working educational application. The system is developed module by module, followed by integration and testing.

2. Development Objectives:

- Implement the planned EduGenie features and modules.
- Create a responsive and user-friendly interface.
- Connect the application with the required database.
- Ensure secure, reliable, and maintainable code.

3. Development Activities:

Activity	Development Work
Frontend Development	Build login, dashboard, learning, quiz, result, and progress screens.
Backend Development	Implement application logic, authentication, and system services.
Database Development	Create tables and manage users, content, questions, and results.
Module Integration	Connect frontend, backend, database, and individual modules.
Testing & Debugging	Identify errors, fix bugs, and verify that features work correctly.

4. Development Tools & Technologies:

The project may use suitable frontend technologies, a backend programming environment, a database management system, an IDE/code editor, and web browsers for development and testing.

5. GetUpLink:

GetUpLink is the proposed access link/connection point for EduGenie. It provides users with a direct and convenient way to access the developed EduGenie platform and its educational services.

6. Development Outcome:

At the end of this phase, the major EduGenie modules are implemented, integrated, and ready for final testing and deployment.
