

EDUGENIE

Project Testing Phase

1. Testing Overview: The testing phase verifies that the EduGenie application works according to the specified requirements. Testing helps identify defects and ensures that the system is reliable, secure, and easy to use.

2. Testing Objectives:

- Verify that all major features work as expected.
- Identify and fix functional and interface errors.
- Check data accuracy and system reliability.
- Ensure the application provides a good user experience.

3. Testing Types:

Testing Type	Purpose
Unit Testing	Tests individual functions or modules separately.
Integration Testing	Checks whether connected modules work correctly together.
Functional Testing	Verifies features such as login, learning, quizzes, and results.
Usability Testing	Checks whether students can use the system easily.
Performance Testing	Checks system response and stability under expected usage.

4. Test Cases:

Important test cases include valid and invalid login, accessing learning resources, attempting quizzes, calculating scores, updating progress, and admin content management. Expected results are compared with actual results.

5. GetUpLink:

GetUpLink is the proposed access link/connection point for EduGenie. It can be tested to confirm that users can reach the EduGenie platform and its educational services successfully.

6. Testing Outcome:

After defects are identified and corrected, the system is re-tested to confirm that the EduGenie application meets its functional and quality requirements before deployment.
